be mated with one male, depending or his age and vitality and where the fowls are yarded, but this proportion may be increased where the birds have ing an improvement on a windmill, following wild fashion dictates, to the free range. Good ventilation in the the invention of O. Olsson of Ord. house is a great help in keeping the Neb., says: stock in good breeding condition.

Should Select Uniform Eggs. Abnormal, small and poorly-shaped eggs should be discarded. Do not set eggs which have thin or very porousappearing shells. Eggs should be set when fresh, if possible, and it is not advisable to use eggs for hatching which are over two weeks old, although stale ones frequently hatch. Selecting uniformly large eggs of the same color is one of the quickest ways to secure uniformity in the offspring and increase the size of the eggs. It is well to clean dirty eggs by rubbing lightly with a damp cloth, taking care not to rub off any more of the natural bloom of the egg than is necessary. Duck eggs usually require washing, which does not appear to injure their

Eggs for hatching should be collect-Broody hens allowed to sit on eggs in ism. A further object is to provide where the temperature is between 50 is entirely automatic in its action. and 60 degrees F., if possible, although they will stand wider variation. IMPROVEMENT IN MARKETING only for a few days, but this should be done daily with those over a week old. Various commercial turning devices are sold by poultry supply companies, or the eggs may be kept in cabinet drawers and shuffled about
